

n8n at the center of your pipelines

When your automation stops being a prototype and starts being Infrastructure. 🐍

The context

Let's be honest: n8n is a marvel for validating ideas in minutes. It's visual, fast, and it does its job. But every serious project reaches an inflection point where "drag-and-drop" turns into a glass ceiling. If you've found yourself in these situations, you know exactly what I'm talking about:

Why engineers shift to wpipe

- Trying to `diff` a 5,000-line JSON in a Pull Request.
- Praying the JS node doesn't fail, because debugging is a black box.
- Feeling like your business logic is "trapped" in a third-party database.

Code-first

Pipelines are Python: versionable, testable, reviewable in Git.

Checkpoints

State persisted to SQLite WAL at every step; resume, don't restart.

Independently lean

<50MB RAM. No broker, no daemon, no metadata server.

What it looks like

```
from wpipe import Pipeline, step

@step(name="ingest", retry_count=3)
def ingest(data):
    return {"payload": data["rows"]}

pipe = Pipeline(pipeline_name="from_n8n")
pipe.set_steps([ingest])

# Canonical JSON -> typed, versionable Python steps.
```

At a glance

Challenge	The No-Code Experience	The wpipe Experience
Architecture	Visual (Canvas)	Code-First (Python/YAML)
Lifecycle	Export/Import JSON	Native Git Flow (CI/CD)
Resilience	Generic retries	Real State Checkpoints
Observability	Logs in proprietary UI	SQL Tracker (Total Transparency)

Challenge	The No-Code Experience	The wpipe Experience
Ecosystem	Predefined nodes	Any library from PyPI

Under the hood

The flow behind the post, as wpipe renders it from code.

+117k downloads
A community of efficiency-first developers.

<50MB RAM
Fits containers, VMs, and Raspberry Pi-class hardware.

SQLite WAL
Industrial durability without a database to administer.

Next step

wpipe is a Python library — try it in your next pipeline:

```
pip install wpipe
```

Steps stay functions you already understand. Docs, diagrams, and dashboards follow. Explore n8n workflows at wpipe.readthedocs.io.

wpipe · Python-native orchestration with SQLite WAL checkpoints, retries, timeouts, parallelism, and self-documenting flows. +117k downloads.
