

Zapier at the center of your pipelines

Critical automation can't live in a black box. It's time to reclaim sovereignty over your data. 🐙

The context

In today's enterprise ecosystem, convenience is often the enemy of security. Relying on SaaS platforms like Zapier to orchestrate sensitive data (customers, finance, IP) introduces risk vectors many organizations can no longer afford. It's not just about "where data is stored," but who controls the execution.

Why engineers shift to wpipe

- **Local-First Execution:** Data never leaves your perimeter. wpipe runs on your servers, in your VPCs, under your firewall rules.
- **Compliance by Design:** By removing unnecessary intermediaries, you drastically reduce the attack surface and simplify data audits.

Code-first

Pipelines are Python: versionable, testable, reviewable in Git.

Checkpoints

State persisted to SQLite WAL at every step; resume, don't restart.

Independently lean

<50MB RAM. No broker, no daemon, no metadata server.

What it looks like

```
from wpipe import Pipeline, step

@step(name="sync", retry_count=3, retry_delay=5)
def sync(data):
    return {"status": push_to_crm(data["lead"])}

pipe = Pipeline(pipeline_name="zap_to_wpipe", tracking_db="sync.db")
pipe.set_steps([sync])
```

At a glance

Security Metric	Traditional SaaS Model	wpipe (Sovereign) Model
Encryption Control	In the vendor's hands	Your own keys / HSM
Attack Surface	Shared public cloud	Your private infrastructure
Execution Logs	Limited dashboard	Complete SQL Database
Vendor Risk	High (External dependency)	None (Open Source / Own code)

Under the hood

The flow behind the post, as wpipe renders it from code.

+117k downloads

A community of efficiency-first developers.

<50MB RAM

Fits containers, VMs, and Raspberry Pi-class hardware.

SQLite WAL

Industrial durability without a database to administer.

Next step

wpipe is a Python library — try it in your next pipeline:

```
pip install wpipe
```

Steps stay functions you already understand. Docs, diagrams, and dashboards follow. Explore Zapier workflows at wpipe.readthedocs.io.

wpipe · Python-native orchestration with SQLite WAL checkpoints, retries, timeouts, parallelism, and self-documenting flows. +117k downloads.
