

Make at the center of your pipelines

When your automation flow grows, visibility turns into noise. Time to take back control with Standard Orchestration. 

The context

Make (formerly Integromat) is an exceptional visual design tool. Watching data flow between "bubbles" is intuitive for quick prototypes. But for teams managing critical infrastructure, that same canvas can become a source of Visual Entropy. As a scenario scales, real engineering challenges start to surface:

Why engineers shift to wpipe

- Pipelines are Python: versionable, testable, reviewable in Git.
- State persisted to SQLite WAL at every step; resume, don't restart.
- <50MB RAM. No broker, no daemon, no metadata server.

Code-first

Pipelines are Python: versionable, testable, reviewable in Git.

Checkpoints

State persisted to SQLite WAL at every step; resume, don't restart.

Independently lean

<50MB RAM. No broker, no daemon, no metadata server.

What it looks like

```
from wpipe import Pipeline, step
from wpipe import Parallel

@step(name="branch_a")
def branch_a(data): return {"a": data["x"]}

@step(name="branch_b")
def branch_b(data): return {"b": data["y"]}

pipe = Pipeline(pipeline_name="make_to_wpipe")
pipe.set_steps([Parallel(steps=[branch_a, branch_b])])
```

At a glance

Engineering Challenge	The Make Experience	The wpipe Standard
Governance	Ad-hoc designs per user	Standardization via Code
Maintainability	Opaque (proprietary JSON)	Transparent (Git Flow)
Observability	Ephemeral UI logs	Forensic SQL Persistence

Engineering Challenge	The Make Experience	The wpipe Standard
Scalability	Limited by SaaS cloud	Vertical & Horizontal (Local/Native)

Under the hood

The flow behind the post, as wpipe renders it from code.

Atomic State

Standardized Logs

Visual_Entropy

+117k downloads

A community of efficiency-first developers.

<50MB RAM

Fits containers, VMs, and Raspberry Pi-class hardware.

SQLite WAL

Industrial durability without a database to administer.

Next step

wpipe is a Python library — try it in your next pipeline:

```
pip install wpipe
```

Steps stay functions you already understand. Docs, diagrams, and dashboards follow. Explore **Make workflows** at wpipe.readthedocs.io.

wpipe · Python-native orchestration with SQLite WAL checkpoints, retries, timeouts, parallelism, and self-documenting flows. +117k downloads.
