

Prefect at the center of your pipelines

Do you really need an "orchestration server" to run your pipelines? Rediscover the power of Embedded Orchestration. 

The context

Prefect has revolutionized "Data Workflow" with its Pythonic approach. It's a brilliant tool for cloud visibility. However, for many use cases, deploying a "Prefect Server" or relying on "Prefect Cloud" adds an infrastructure and latency layer that isn't always justified. If you want the resilience of a modern orchestrator with the simplicity of a native library, wpipe is your tactical ally.

Why engineers shift to wpipe

- Pipelines are Python: versionable, testable, reviewable in Git.
- State persisted to SQLite WAL at every step; resume, don't restart.
- <50MB RAM. No broker, no daemon, no metadata server.

Code-first

Pipelines are Python: versionable, testable, reviewable in Git.

Checkpoints

State persisted to SQLite WAL at every step; resume, don't restart.

Independently lean

<50MB RAM. No broker, no daemon, no metadata server.

What it looks like

```
from wpipe import Pipeline, step

@step(name="resumable", checkpoint=True)
def resumable(data):
    return {"state": hydrate(data["cursor"])}

pipe = Pipeline(pipeline_name="resilient", tracking_db="state.db")
pipe.set_steps([resumable])
```

At a glance

Category	Prefect (Server/Cloud)	wpipe (Embedded Library)
Infrastructure	Requires Server/Agents	Zero-Config (Self-contained)
Persistence	Postgres / Cloud DB	SQLite WAL (Local-First)
Dependencies	External API / Local service	NONE (Standard Python Lib)
Latency	Network-dependent	Disk-speed (Atomic writes)

Category	Prefect (Server/Cloud)	wpipe (Embedded Library)
Deployment	Orchestrator + App	Your app only

Under the hood

The flow behind the post, as wpipe renders it from code.

Embedded Architecture

Your Code

wpipe Engine

Local SQLite

Prefect Architecture

**+117k downloads**

A community of efficiency-first developers.

<50MB RAM

Fits containers, VMs, and Raspberry Pi-class hardware.

SQLite WAL

Industrial durability without a database to administer.

Next step

wpipe is a Python library — try it in your next pipeline:

```
pip install wpipe
```

Steps stay functions you already understand. Docs, diagrams, and dashboards follow. Explore **Prefect** workflows at wpipe.readthedocs.io.

wpipe · Python-native orchestration with SQLite WAL checkpoints, retries, timeouts, parallelism, and self-documenting flows. +117k downloads.
