

wpipe at the center of your pipelines

Declarative configuration, without leaving the Python ecosystem

The context

In the "low-code" world you switch environments when you want to configure: a visual panel, a giant YAML, a proprietary database. All outside your code, all hard to version. With wpipe configuration lives in the developer's world: you load your flow and your parameters without abandoning Python.

Why engineers shift to wpipe

- Pipelines are Python: versionable, testable, reviewable in Git.
- State persisted to SQLite WAL at every step; resume, don't restart.
- <50MB RAM. No broker, no daemon, no metadata server.

Code-first

Pipelines are Python: versionable, testable, reviewable in Git.

Checkpoints

State persisted to SQLite WAL at every step; resume, don't restart.

Independently lean

<50MB RAM. No broker, no daemon, no metadata server.

What it looks like

```
from wpipe import Pipeline, step

@step(name="my_step", retry_count=3, retry_delay=2, checkpoint=True)
def my_step(data):
    return {"result": process(data["input"])}

pipe = Pipeline(pipeline_name="my_pipeline", tracking_db="pipeline.db")
pipe.set_steps([my_step])
pipe.run({"input": [...]}

# Python-native orchestration: checkpoints, retries, self-documenting.
```

At a glance

Aspect	Visual panel	Config in code (wpipe)
Versioning	✗ No diffs	✓ Native Git Flow
Review	Blind clicks	✓ Pull Request
Portability	Provider-dependent	✓ One YAML or Python file

Aspect	Visual panel	Config in code (wpipe)
Vendor exit	Traumatic	✓ Trivial (pip install)

Under the hood

The flow behind the post, as wpipe renders it from code.

+117k downloads
A community of efficiency-first developers.

<50MB RAM
Fits containers, VMs, and Raspberry Pi-class hardware.

SQLite WAL
Industrial durability without a database to administer.

Next step

wpipe is a Python library — try it in your next pipeline:

```
pip install wpipe
```

Steps stay functions you already understand. Docs, diagrams, and dashboards follow. Explore **wpipe** workflows at wpipe.readthedocs.io.

wpipe · Python-native orchestration with SQLite WAL checkpoints, retries, timeouts, parallelism, and self-documenting flows. +117k downloads.
