

wpipe at the center of your pipelines

Your pipeline, measured and visualized in real time

The context

One thing is for your pipeline to "run." Another is to watch it run: which step is executing, how long each stage takes, which events it fired, where it last failed. With wpipe observability isn't a plugin you buy separately — it's part of the engine. Every run is recorded in a SQL tracker, and you can visualize it with one line.

Why engineers shift to wpipe

- Timeline: the real execution sequence of your steps.
- Analytics: average duration, success rate, top slow steps.
- Alerts: thresholds that fired (and when).
- Events: pre/post hooks and triggered events.
- States / Pipelines: the persistent state of each run.

Code-first

Pipelines are Python: versionable, testable, reviewable in Git.

Checkpoints

State persisted to SQLite WAL at every step; resume, don't restart.

Independently lean

<50MB RAM. No broker, no daemon, no metadata server.

What it looks like

```
from wpipe import Pipeline, step

@step(name="my_step", retry_count=3, retry_delay=2, checkpoint=True)
def my_step(data):
    return {"result": process(data["input"])}

pipe = Pipeline(pipeline_name="my_pipeline", tracking_db="pipeline.db")
pipe.set_steps([my_step])
pipe.run({"input": [...]})

# Python-native orchestration: checkpoints, retries, self-documenting.
```

At a glance

Aspect	Legacy / wpipe	wpipe
Definition	Config/DSL or canvas	Python code

Aspect	Legacy / wpipe	wpipe
State	Scattered / none	SQLite WAL checkpoints
Observability	Partial	Tracker SQL + dashboard
Footprint	Heavy	<50MB RAM

Under the hood

The flow behind the post, as wpipe renders it from code.

+117k downloads
A community of efficiency-first developers.

<50MB RAM
Fits containers, VMs, and Raspberry Pi-class hardware.

SQLite WAL
Industrial durability without a database to administer.

Next step

wpipe is a Python library — try it in your next pipeline:

```
pip install wpipe
```

Steps stay functions you already understand. Docs, diagrams, and dashboards follow. Explore **wpipe** workflows at wpipe.readthedocs.io.
