

wpipe at the center of your pipelines

Data contracts: your pipeline validated where it hurts most

The context

In data, the classic error is elegant: a field arrives as `str` where you expected `int`, or a `None` travels through 4 steps until it explodes at the end. In a contract-less script, you discover that in production. With wpipe you define your pipeline's data contract and validation happens automatically — like a schema in a database, but at every step.

Why engineers shift to wpipe

- Pipelines are Python: versionable, testable, reviewable in Git.
- State persisted to SQLite WAL at every step; resume, don't restart.
- <50MB RAM. No broker, no daemon, no metadata server.

Code-first

Pipelines are Python: versionable, testable, reviewable in Git.

Checkpoints

State persisted to SQLite WAL at every step; resume, don't restart.

Independently lean

<50MB RAM. No broker, no daemon, no metadata server.

What it looks like

```
from wpipe import Pipeline, step

@step(name="my_step", retry_count=3, retry_delay=2, checkpoint=True)
def my_step(data):
    return {"result": process(data["input"])}

pipe = Pipeline(pipeline_name="my_pipeline", tracking_db="pipeline.db")
pipe.set_steps([my_step])
pipe.run({"input": [...]})

# Python-native orchestration: checkpoints, retries, self-documenting.
```

At a glance

Without contract	With PipelineContext
The error appears at the end	Validation happens at the edge
Types "work by accident"	Types verified against the schema

Without contract	With PipelineContext
No shape documentation	The contract is self-documenting

Under the hood

The flow behind the post, as wpipe renders it from code.

+117k downloads

A community of efficiency-first developers.

<50MB RAM

Fits containers, VMs, and Raspberry Pi-class hardware.

SQLite WAL

Industrial durability without a database to administer.

Next step

wpipe is a Python library — try it in your next pipeline:

```
pip install wpipe
```

Steps stay functions you already understand. Docs, diagrams, and dashboards follow. Explore **wpipe** workflows at wpipe.readthedocs.io.

wpipe · Python-native orchestration with SQLite WAL checkpoints, retries, timeouts, parallelism, and self-documenting flows. +117k downloads.
