

MAKE PIPELINES, ENGINEERED

Make: Visual flows, real engineering rigor.

When your automation flow grows, visibility turns into noise.
Time to take back control with Standard Orche...

<50 MB

RAM, total

SQLite

WAL state

Where it hurts today

Three things quietly cost teams time and trust every single week.

More canvas JS,
less logic

Parallelism done
by hand

Observability is
luck

wpipe turns these into code you control.

What you gain

Code-first

Pipelines are Python —
versionable, testable,
reviewable.

Resume, don't restart

Every step checkpoints
to SQLite WAL.

Featherweight

<50 MB RAM. No broker,
no daemon.

Crash at step 7? Resume from step 4.

Every step persists its state to SQLite WAL — a rerun cost you never pay again.

One pipeline, fully instrumented

State, retries, parallelism and audit — all inside the same run.

flow

wpipe vs. the status quo

Engineering Challenge	The Make Experience	The wpipe Standard
Governance	Ad-hoc designs per user	Standardization via Code
Maintainability	Opaque (proprietary JSON)	Transparent (Git Flow)
Observability	Ephemeral UI logs	Forensic SQL Persistence
Scalability	Limited by SaaS cloud	Vertical & Horizontal (Local/Native)

Based on what the engineering community hits daily.

Answers four questions in one run ↘

Did it run, how far, what failed, and can it resume? Yes, yes, exactly, and automatically.

```
python my_pipeline.py
```

SEE IT IN ACTION

Six lines. That's the learning curve.

```
from wpipe import Pipeline, step, Parallel
```

```
@step(name="a", retry_count=3)
def a(d): return {"a": d["x"]}
```

```
@step(name="b", retry_count=3)
def b(d): return {"b": d["y"]}
```

```
pipe.set_steps([Parallel(steps=[a, b])])
```

CHECKPOINTS · RETRIES · TIMEOUT · PARALLEL · TRACKER

Code-first

Pipelines are Python —
versionable, testable,
reviewable.

Resume, don't restart

Every step checkpoints
to SQLite WAL.

Featherweight

<50 MB RAM. No broker,
no daemon.

Try wpipe in your next pipeline

Install the library, wrap your step, and watch checkpoints and docs appear by themselves.

```
pip install wpipe
```
