

AIRFLOW PIPELINES, ENGINEERED

Airflow: DAG power, none of the daemon.

Is your data development environment slowing you down?
Reclaim the "Edit-Run-Debug" agility without the inf...

<50 MB

RAM, total

SQLite

WAL state

THE SHIFT

Where it hurts today

Three things quietly cost teams time and trust every single week.

A metadata DB to babysit

DAGs drift from reality

CI for DAGs is painful

wpipe turns these into code you control.

What you gain

Code-first

Pipelines are Python — versionable, testable, reviewable.

Resume, don't restart

Every step checkpoints to SQLite WAL.

Featherweight

<50 MB RAM. No broker, no daemon.

Crash at step 7? Resume from step 4.

Every step persists its state to SQLite WAL — a rerun cost you never pay again.

THE ARCHITECTURE

One pipeline, fully instrumented

State, retries, parallelism and audit — all inside the same run.

wpipe vs. the status quo

Development Metric	Apache Airflow	wpipe (Modern Lib)
Local Setup	Complex (Docker/Helm)	Instant (`pip install`)
Feedback Loop	Slow (Scheduler Latency)	Immediate (Direct Run)
Resource Usage	GBs of RAM	MBs of RAM
Auditability	Centralized logs	Native Local SQLite Tracker
Maintainability	High (Infrastructure)	Low (Code Only)

Based on what the engineering community hits daily.

Answers four questions in one run ↘

Did it run, how far, what failed, and can it resume? Yes, yes, exactly, and automatically.

```
python my_pipeline.py
```

SEE IT IN ACTION

Six lines. That's the learning curve.

```
from wpipe import Pipeline, step

@step(name="job", retry_count=3, retry_delay=2)
def job(data):
    return {"ok": run(data["job"])}

pipe = Pipeline(pipeline_name="airflow_like")

CHECKPOINTS · RETRIES · TIMEOUT · PARALLEL · TRACKER
```

Code-first

Pipelines are Python — versionable, testable, reviewable.

Resume, don't restart

Every step checkpoints to SQLite WAL.

Featherweight

<50 MB RAM. No broker, no daemon.

Try wpipe in your next pipeline

Install the library, wrap your step, and watch checkpoints and docs appear by themselves.

```
pip install wpipe
```
