

PREFECT PIPELINES, ENGINEERED

Prefect: Long-running flows that never lose their place.

Do you really need an "orchestration server" to run your pipelines? Rediscover the power of Embedded Orches...

<50 MB

RAM, total

SQLite

WAL state

Where it hurts today

Three things quietly cost teams time and trust every single week.

Long runs lose
state

Workers + server
+ fleet

Observability
gets costly

wpipe turns these into code you control.

What you gain

Code-first

Pipelines are Python —
versionable, testable,
reviewable.

Resume, don't restart

Every step checkpoints
to SQLite WAL.

Featherweight

<50 MB RAM. No broker,
no daemon.

Crash at step 7? Resume from step 4.

Every step persists its state to SQLite WAL — a rerun cost you never pay again.

One pipeline, fully instrumented

State, retries, parallelism and audit — all inside the same run.

wpipe vs. the status quo

Category	Prefect (Server/Cloud)	wpipe (Embedded Library)
Infrastructure	Requires Server/Agents	Zero-Config (Self-contained)
Persistence	Postgres / Cloud DB	SQLite WAL (Local-First)
Dependencies	External API / Local service	NONE (Standard Python Lib)
Latency	Network-dependent	Disk-speed (Atomic writes)
Deployment	Orchestrator + App	Your app only

Based on what the engineering community hits daily.

Answers four questions in one run ↘

Did it run, how far, what failed, and can it resume? Yes, yes, exactly, and automatically.

```
python my_pipeline.py
```

SEE IT IN ACTION

Six lines. That's the learning curve.

```
from wpipe import Pipeline, step

@step(name="resume_me", checkpoint=True)
def resume_me(data):
    return {"state": hydrate(data["cursor"])}

pipe = Pipeline(pipeline_name="resilient")

CHECKPOINTS · RETRIES · TIMEOUT · PARALLEL · TRACKER
```

Code-first

Pipelines are Python — versionable, testable, reviewable.

Resume, don't restart

Every step checkpoints to SQLite WAL.

Featherweight

<50 MB RAM. No broker, no daemon.

Try wpipe in your next pipeline

Install the library, wrap your step, and watch checkpoints and docs appear by themselves.

```
pip install wpipe
```
