

ZAPIER PIPELINES, ENGINEERED

Zapier: Automations that finally hold state.

Orchestration that scales with you.

<50 MB

RAM, total

SQLite

WAL state

Where it hurts today

Three things quietly cost teams time and trust every single week.

**Zaps break
silently**

**No real retry
policy**

**Data held
hostage by a
SaaS**

wpipe turns these into code you control.

What you gain

Code-first

Pipelines are Python —
versionable, testable,
reviewable.

Resume, don't restart

Every step checkpoints
to SQLite WAL.

Featherweight

<50 MB RAM. No broker,
no daemon.

Crash at step 7? Resume from step 4.

Every step persists its state to SQLite WAL — a rerun cost you never pay again.

One pipeline, fully instrumented

State, retries, parallelism and audit — all inside the same run.

wpipe vs. the status quo

Code-first

Pipelines are Python —
versionable, testable,
reviewable.

Resume, don't restart

Every step checkpoints
to SQLite WAL.

Featherweight

<50 MB RAM. No broker,
no daemon.

Based on what the engineering community hits daily.

Answers four questions in one run ↘

Did it run, how far, what failed, and can it resume? Yes, yes, exactly, and automatically.

```
python my_pipeline.py
```

SEE IT IN ACTION

Six lines. That's the learning curve.

```
from wpipe import Pipeline, step

@step(name="sync", retry_count=3, retry_delay=5)
def sync(data):
    return {"done": push_crm(data["lead"])}

pipe = Pipeline(pipeline_name="zap2wpipe", tracking_db="sync.db")
pipe.set_steps([sync])

CHECKPOINTS · RETRIES · TIMEOUT · PARALLEL · TRACKER
```

Code-first

Pipelines are Python —
versionable, testable,
reviewable.

Resume, don't restart

Every step checkpoints
to SQLite WAL.

Featherweight

<50 MB RAM. No broker,
no daemon.

Try wpipe in your next pipeline

Install the library, wrap your step, and watch checkpoints and docs appear by themselves.

```
pip install wpipe
```
