

N8N PIPELINES, ENGINEERED

N8N: No-code today, code you can ship tomorrow.

Orchestration that scales with you.

+117k
downloads

<50 MB
RAM, total

SQLite
WAL state

Where it hurts today

Three things quietly cost teams time and trust every single week.

READMEs stay
empty

JSON exports
un-diffable

Debugging is a
black box

wpipe turns these into code you control.

What you gain

Code-first

Pipelines are Python —
versionable, testable,
reviewable.

Resume, don't restart

Every step checkpoints
to SQLite WAL.

Featherweight

<50 MB RAM. No broker,
no daemon.

Crash at step 7? Resume from step 4.

Every step persists its state to SQLite WAL — a rerun cost you never pay again.

One pipeline, fully instrumented

State, retries, parallelism and audit — all inside the same run.

wpipe vs. the status quo

Feature	WPipe	Airflow	n8n	Celery	Prefect	Zapier/Make
Memory Footprint	< 50MB	> 2GB	> 500MB	> 200MB	> 500MB	Cloud / High
Configuration	Pure Python	Python/YAML	Visual UI	Python/Broker	Python	Visual UI
Resilience	SQLite Checkpoints	Postgres/DB	Database	Redis/RabbitMQ	Cloud/DB	None (Manual)
Setup Time	< 1 min	Hours	Minutes	Hours	Minutes	Minutes
Cost	Free/OSS	OSS (High Infra)	OSS/Paid	OSS (Infra)	OSS/Cloud	Per Execution
Learning Curve	Low (Pythonic)	High	Medium	High	Medium	Low

Based on what the engineering community hits daily.

Answers four questions in one run ↘

Did it run, how far, what failed, and can it resume? Yes, yes, exactly, and automatically.

```
python my_pipeline.py
```

Six lines. That's the learning curve.

```
from wpipe import Pipeline, step

@step(name="ingest", retry_count=3)
def ingest(data):
    return {"rows": data["payload"]}

pipe = Pipeline(pipeline_name="from_n8n")
pipe.set_steps([ingest])
pipe.run(task_ctx)

CHECKPOINTS · RETRIES · TIMEOUT · PARALLEL · TRACKER
```

Code-first

Pipelines are Python — versionable, testable, reviewable.

Resume, don't restart

Every step checkpoints to SQLite WAL.

Featherweight

<50 MB RAM. No broker, no daemon.

Try wpipe in your next pipeline

Install the library, wrap your step, and watch checkpoints and docs appear by themselves.

```
pip install wpipe
```
