

CRON PIPELINES, ENGINEERED

Cron: Upgrade cron from script to system.

Orchestration that scales with you.

<50 MB

RAM, total

SQLite

WAL state

Where it hurts today

Three things quietly cost teams time and trust every single week.

Failures are
silent

No history, no
audit

One typo kills the
job

wpipe turns these into code you control.

What you gain

Code-first

Pipelines are Python —
versionable, testable,
reviewable.

Resume, don't restart

Every step checkpoints
to SQLite WAL.

Featherweight

<50 MB RAM. No broker,
no daemon.

Crash at step 7? Resume from step 4.

Every step persists its state to SQLite WAL — a rerun cost you never pay again.

THE ARCHITECTURE

One pipeline, fully instrumented

State, retries, parallelism and audit — all inside the same run.

wpipe vs. the status quo

Code-first

Pipelines are Python —
versionable, testable,
reviewable.

Resume, don't restart

Every step checkpoints
to SQLite WAL.

Featherweight

<50 MB RAM. No broker,
no daemon.

Based on what the engineering community hits daily.

Answers four questions in one run ↘

Did it run, how far, what failed, and can it resume? Yes, yes, exactly, and automatically.

```
python my_pipeline.py
```

SEE IT IN ACTION

Six lines. That's the learning curve.

```
from wpipe import Pipeline, step

@step(name="job", retry_count=3, retry_delay=10)
def job(data):
    return {"done": run(data["command"])}

pipe = Pipeline(pipeline_name="cron_pro", tracking_db="cron.db")

CHECKPOINTS · RETRIES · TIMEOUT · PARALLEL · TRACKER
```

Code-first

Pipelines are Python —
versionable, testable,
reviewable.

Resume, don't restart

Every step checkpoints
to SQLite WAL.

Featherweight

<50 MB RAM. No broker,
no daemon.

Try wpipe in your next pipeline

Install the library, wrap your step, and watch checkpoints and docs appear by themselves.

```
pip install wpipe
```
