

MAKE PIPELINES, ENGINEERED

Make: Visual flows, real engineering rigor.

When your automation flow grows,
visibility turns into noise. Time to
take back control...

WAL state

THE CONTEXT

Where it hurts today

More canvas JS, less logic

Parallelism done by hand

Observability is luck

THE SHIFT

What you gain

Code-first

Pipelines are Python — versionable, testable.

Resume, don't restart

Every step checkpoints to the WAL.

Featherweight

<50 MB. No broker, no daemon.

THE ARCHITECTURE

One pipeline, fully instrumented

State, retries and audit — inside a single run.

SIDE BY SIDE

wpipe vs. the status quo

Engineering Challenge	The Make Experience	The wpipe Standard
Governance	Ad-hoc designs per user	Standardization via Code
Maintainability	Opaque (proprietary JSON)	Transparent (Git Flow)
Observability	Ephemeral UI logs	Forensic SQL Persistence
Scalability	Limited by SaaS cloud	Vertical & Horizontal (Local/Native)

SEE IT IN ACTION

Six lines. That's it.

```
from wpipe import Pipeline,  
step, Parallel  
  
@step(name="a", retry_count=3)  
def a(d):  
    return {"a": d["x"]}  
  
@step(name="b", retry_count=3)  
def b(d):  
    return {"b": d["y"]}
```

CHECKPOINTS · RETRIES · TIMEOUT ·
PARALLEL · TRACKER

Try wpipe in your next pipeline ✓

Install the library, wrap your step
— checkpoints and docs appear
by themselves.

```
pip install wpipe
```

wpipe

Python-native orchestration
