

MAKE PIPELINES, ENGINEERED

Make: Visual flows, real engineering rigor.

Tired of playing detective with your automations? Stop guessing and start knowing.

**<50
MB**

RAM, total

SQLite

WAL state

THE CONTEXT

Where it hurts today

More canvas JS, less logic

Parallelism done by hand

Observability is luck

THE SHIFT

What you gain

Code-first

Pipelines are Python — versionable, testable.

Resume, don't restart

Every step checkpoints to the WAL.

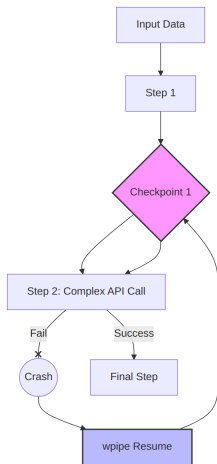

Featherweight

<50 MB. No broker, no daemon.

THE ARCHITECTURE

One pipeline, fully instrumented

State, retries and audit — inside a single run.

SIDE BY SIDE

wpipe vs. the status quo

Feature	Make	wpipe
State Persistence	Ephemeral / Cloud	Persistent (Local SQLite)
Failure Recovery	Manual / Re-run	Automatic (Checkpoints)
Data Visibility	Visual inspectors	SQL Query / Web Dashboard
Retry Strategy	Basic	Advanced (Configurable per step)

SEE IT IN ACTION

Six lines. That's it.

```
from wpipe import Pipeline,  
step, Parallel  
  
@step(name="a", retry_count=3)  
def a(d):  
    return {"a": d["x"]}  
  
@step(name="b", retry_count=3)  
def b(d):  
    return {"b": d["y"]}
```

CHECKPOINTS · RETRIES · TIMEOUT ·
PARALLEL · TRACKER

Try wpipe in your next pipeline ✓

Install the library, wrap your step
— checkpoints and docs appear
by themselves.

```
pip install wpipe
```
